Spain - Human Development Reports - UNDP 15 Oct 2011. Five months into the long Spanish spring of 2011, we've seen how what started as a small, inarticulate and youth-centred movement has evolved into something much more significant. The Spanish economy has been hit hard by the financial crisis, with unemployment rates rising to record levels and public confidence in the government waning. The country has been forced to adjust to a new reality, and the movement has played a key role in the process.

Despite the challenges, there are signs of hope on the horizon. The movement has inspired change both within Spain and beyond, and it has brought new voices to the political fray. As the country moves forward, it will be interesting to see how the movement continues to evolve and what impact it will have on Spanish politics and society.
